

Estimate | Quotation Feedback Document

General Thoughts

The idea of the Estimate System is that the Salesperson can create customer estimates, either from the customer's property or when they reach the office. The issue here is that in the areas we cover service / internet access is somewhat troublesome and as such standalone / offline working is essential. It's not always practical to request the clients wifi.

Options

The need for providing several different options is now deemed to be un-necessary, instead the intention is to create a master estimate which can be amended and save as a secondary or additional estimate. This removes the complexity surrounding summary tables and user entry.

The need to insert an image of the hardware under each item is now deemed un-necessary, instead a photo or thumbnail image is required (see inclusion of room photos and project slider). The issue was that if a client didn't want a certain item of hardware then either we show the incorrect image or non at all.

Centralised Admin Area

It's important that there is some localised control that the user can use to tweak the estimate, such as Company Name, Salesperson Name, Company bank details, Estimate Caveats, Estimate Footer information, Company logo, header images, theme colours and accreditation images.

Change of naming convention from Quotation to Estimate.

In the first instance the document created should be called an Estimate as opposed to a Quotation, the estimate being a means to roughly calculate the value of the services, however it can be changed post survey. A quotation would be a fixed price that cannot change.

Handling of Discounts / Price amendments

As not all projects fit within standard pricing 100% of the time, it's important that the facility to override a price is built into the system, its suggested that if the price has been overridden that the line item is highlighted either in red to show a reduced price or green if it has been increased.

Inclusion of Room Photos and Project Slider

It should be mandatory for each room location to feature either a photograph of the product being changed or a thumbnail image of the proposed new. The inclusion of a project library on the UI is also a nice feature to include, this makes it easier for the user to grasp the project and also for the client to understand which windows we are referencing. Also a Quotation Summary below this as a high level review.

Bathroom

Quotation Summary

Net Total (excl. VAT):	£6020.00
VAT (20%):	£1204.00
Gross Total:	£7224.00

Pricing /Product Information

The prices should be taken from 5 pricing files CSV or similar that can be accessed centrally. To include:

- window_types
- glass_types
- extras
- paint_types
- hardware_types

Window Types

Each type of window is currently grouped with a heading then is based upon a size. It would be down to the salesperson to ensure that the correct size bracket is selected. Each heading in capital letters for readability when scrolling through the drop down list. Hardware column is no longer required as the need for attaching hardware image to each entry is no deemed not required.

Glass Types

Standard Glass Types can be calculated from a square meterage (this is based upon the sizes inputted by the user on the data entry screen. However if the product is Single Glazed or Heritage Glazed then the quantity of panes would be required in order to pull the correct price, however the glass cost has a minimum charge of 0.3m². It may be better to either treat heritage/single glazing as an extra and hold a value or, if single glazing / heritage is selected then a further step is required and the user is prompted to enter a value of units / panes required.

Glass	Additional Cost
Softcoat, Low Iron, Argon Gas Filled, Warm Edge Spacer Toughened	0
Softcoat, Satin, Argon Gas Filled, Warm Edge Spacer Toughened	100

Extras

All products have the possibility for an extra item to be added. Not all of these have an associated cost but need to be listed so that the client / and our surveyor are aware of what has been quoted for. For an example 6.5R Ovolo is our standard window profile and carries no additional cost however I would like to make it clear that the window has been quoted in that profile. Some of these extras below are a per item extra ; such as glazing bars – which could be that the user selects 23mm Glazing Bars and uses say 6 as the extras quantity whereas the Mayfair lambs tongue mould is calculated by square meterage and as such the option would be selected and the square meterage value is used as the extras quantity. It's important that the UI shows the extras added to each item and the quantity assigned and its value, on the Estimate it needs to be listed but with no value shown.

Extra	Cost
